How Healthcare Data Theft Creates Chaos

Healthcare is the Largest Target of Cybercriminals

The Largest Healthcare Data Breach of 2019 Compromised 114,468 Patient's Information

What Does the Aftermath of a Data Breach Look Like?

Delay of Pertinent Patient Care

WannaCry ransomware shutdown the operations of 48 hospitals. Down for at least one work day, NHS hospitals turned away patients and canceled surgeries.

Notifying Patients of a Breach Requires Additional Manpower

$610,000 on average to bring in external parties

Loss of Over $2 million

Rebuilding computer systems cost $6.45M

Cost to Settle with Affected Patients

$6.45M

HIPAA Penalty Fines for Failing to Protect Patient Information

$16 million

41,232,527 Healthcare Records were compromised in 2019

$5.7 million

Temporary Reliance on Paper Records, Leading to a Loss in Productivity

Cyberattacks in New York and West Virginia required hospitals switch to paper records for 1 week
